

## Rules on letting this property

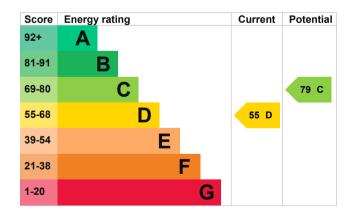

Properties can be let if they have an energy rating from A to E.

You can read <u>guidance</u> for <u>landlords</u> on the <u>regulations</u> and <u>exemptions</u> (<a href="https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-quidance">https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-quidance</a>).

# **Energy rating and score**

This property's current energy rating is D. It has the potential to be C.

<u>See how to improve this property's energy efficiency.</u>

The graph shows this property's current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in England and Wales:

the average energy rating is D the average energy score is 60

# Breakdown of property's energy performance

### Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature              | Description                                    | Rating    |
|----------------------|--|-----------|
| Wall                 | Cavity wall, as built, no insulation (assumed) | Poor      |
| Wall                 | Solid brick, as built, no insulation (assumed) | Very poor |
| Roof                 | Pitched, 200 mm loft insulation                | Good      |
| Roof                 | Roof room(s), insulated                        | Average   |
| Window               | Fully double glazed                            | Average   |
| Main heating         | Boiler and radiators, oil                      | Average   |
| Main heating control | Programmer, room thermostat and TRVs           | Good      |
| Hot water            | From main system                               | Average   |
| Lighting             | Low energy lighting in 90% of fixed outlets    | Very good |
| Floor                | Suspended, no insulation (assumed)             | N/A       |
| Secondary heating    | None   | N/A       |

### Primary energy use

The primary energy use for this property per year is 190 kilowatt hours per square metre (kWh/m2).

| <b>Environmental</b> | impact | of this |
|----------------------|--------|---------|
| property             |        |         |

This property's current environmental impact rating is E. It has the potential to be C.

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year. CO2 harms the environment.

An average household 6 tonnes of CO2 produces

This property produces 6.0 tonnes of CO2

This property's potential 2.7 tonnes of CO2 production

You could improve this property's CO2 emissions by making the suggested changes. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

# Changes you could make

| Step                       | Typical installation cost | Typical yearly saving |
|----------------------------|---------------------------|-----------------------|
| 1. Room-in-roof insulation | £1,500 - £2,700           | £193                  |

| Step                                    | Typical installation cost | Typical yearly saving |
|---|---------------------------|-----------------------|
| 2. Cavity wall insulation               | £500 - £1,500             | £120                  |
| 3. Internal or external wall insulation | £4,000 - £14,000          | £95                   |
| 4. Floor insulation (suspended floor)   | £800 - £1,200             | £155                  |
| 5. Solar water heating                  | £4,000 - £6,000           | £113                  |
| 6. Solar photovoltaic panels            | £3,500 - £5,500           | £714                  |

## Paying for energy improvements

You might be able to get a grant from the <u>Boiler Upgrade Scheme (https://www.gov.uk/apply-boiler-upgrade-scheme)</u>. This will help you buy a more efficient, low carbon heating system for this property.

# Estimated energy use and potential savings

Based on average energy costs when this EPC was created:

| Estimated yearly energy cost for this property       | £1951 |
|--|-------|
| Potential saving if you complete every step in order | £677  |

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

## Heating use in this property

Heating a property usually makes up the majority of energy costs.

# Estimated energy used to heat this property

| Type of heating                                   | Estimated energy used  |  |
|---|------------------------|--|
| Space heating                                     | 14111 kWh per year     |  |
| Water heating                                     | 2964 kWh per year      |  |
| Potential energy savings by installing insulation |                        |  |
| Type of insulation                                | Amount of energy saved |  |
| Cavity wall insulation                            | 1171 kWh per year      |  |

#### Saving energy in this property

Solid wall insulation

925 kWh per year

# Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.

#### Assessor contact details

Assessor's name Layla Girone-Maddocks
